

CLEAN VERSIONS OF CLAIMS 1 AND 2 AS AMENDED

AN ✓
1. (amended) A method for inhibiting the growth of neoplastic cells sensitive to the compounds of formula I comprising exposing the cells to a growth inhibiting effective amount of a compound of Formula I:

(I)

wherein R₁ to R₃ each represent a lower alkyl group, an oxy group, an oxy-lower alkyl group, a lower alkyloxy group, a carbonyl group, a lower alkenyl group, an optionally-substituted imino group, a lower alkylimino group optionally substituted at its nitrogen atom, a thio-lower alkyl group, or a lower alkylthio group; to each group, bonded is an aryl group or a heterocyclic group, or each group is substituted by an aryl group or a heterocyclic group; and said aryl or heterocyclic group may be further substituted by any of a halogen atom, a nitro group, a lower alkylamino group, an acylamino group, a lower alkyl group, a lower alkoxy group, a halo-lower alkyl group, a lower cycloalkyl group, or an aryl, heterocyclic, aryl-lower alkyl, heterocyclic-lower alkyl, aryl-lower alkyloxy, heterocyclic-lower alkyloxy, aryl-lower alkenyl or heterocyclic-lower alkenyl group optionally substituted by any of a halogen atom or a lower alkyl group, with the proviso that R₁ to R₃ are not simultaneously hydrogen atoms;

R₄ is selected from the group consisting of hydrogen atom or lower alkyl;

R₅ is selected from the group consisting of carboxyl, an esterified carboxyl group, or an amidated carboxyl group.

2 (amended). A method of treating a mammal having precancerous lesions sensitive to the compounds of formula I comprising administering to said mammal a pharmacologically effective amount of a compound of Formula I:

wherein R₁ to R₃ each represent a lower alkyl group, an oxy group, an oxy-lower alkyl group, a lower alkyloxy group, a carbonyl group, a lower alkenyl group, an optionally-substituted imino group, a lower alkylimino group optionally substituted at its nitrogen atom, a thio-lower alkyl group, or a lower alkylthio group; to each group, bonded is an aryl group or a heterocyclic group, or each group is substituted by an aryl group or a heterocyclic group; and said aryl or heterocyclic group may be further substituted by any of a halogen atom, a nitro group, a lower alkylamino group, an acylamino group, a lower alkyl group, a lower alkoxy group, a halo-lower alkyl group, a lower cycloalkyl group, or an aryl, heterocyclic, aryl-lower alkyl, heterocyclic-lower alkyl, aryl-lower alkyloxy, heterocyclic-lower alkyloxy, aryl-lower alkenyl or heterocyclic-lower alkenyl group optionally substituted by any of a halogen atom or a lower alkyl group, with the proviso that R₁ to R₃ are not simultaneously hydrogen atoms;

R₄ is selected from the group consisting of hydrogen atom or lower alkyl;

R₅ is selected from the group consisting of carboxyl, an esterified carboxyl group, or an amidated carboxyl group.
